
SUMMARY

Software engineer with 3 years of experience in modern web app development using Next, React and Angular. Passionate about maintaining a clean codebase to which code reviews, team communication and collaboration are central

EXPERIENCE**Kloudfuse – Software Engineer****Jul 2024 – present****Tech Stack:** *React, d3.js, JavaScript/TypeScript, CSS/SCSS, Tailwind CSS, HTML, Git*

Contributed to the development of an observability platform optimized for scalability and cost-efficiency, providing organizations with actionable insights to enhance system performance:

- Implemented comprehensive error handling and display across the platform to improve issue tracking
- Refined platform-wide styling, ensuring a cohesive and polished user interface
- Developed an interactive d3.js-based heatmap for visualizing latency distribution, enhancing data insights and system monitoring
- Added UI components for managing integration connections (e.g., Kubernetes, AWS), improving user experience and ease of configuration
- Designed custom SVG logos for integrations (e.g., Kubernetes, AWS) using Figma, maintaining visual consistency with the platform's branding and enhancing overall UI
- Configured a documentation generation pipeline using Antora to convert AsciiDoc (.adoc) pages into a structured site, streamlining the creation and maintenance of integration documentation
- Worked on the development of Role-Based Access Control (RBAC) interfaces for managing groups, users, policies, and folder permissions, improving security and administrative workflows

PipeIQ – Founding Software Engineer**Jun 2023 – Jul 2024****A Generative AI startup targeting marketing and sales use cases****Tech Stack:** *Next.js, JavaScript/TypeScript, CSS/SCSS, Tailwind CSS, HTML, Git*

Built the frontend for the next-generation marketing orchestration platform that leverages Generative AI from the ground up:

- Developed UI integration components for Hubspot, Salesforce, Zoom, Calendly, Gong platforms and configured the connection process
- Built a social graph with d3.js for visual tracking of company leads
- Configured routing and state management of data between the application pages using Next.js
- Coached junior team members on project structure implementation & scalability, and ensured consistency across application modules
- Added Redux and ReduxPersist to the project to optimize data management and persist data across reloads
- Configured AWS Gateway API lambda functions and S3 Bucket resources
- Developed a custom chat interface leveraging WebSocket technology for real-time communication with the ChatGPT model, ensuring smooth and responsive user interactions

ProgramEquity – Software Engineer**Feb 2023 – Jun 2023****501c3 nonprofit that connects tech workers to skill-based volunteering workflows on open source climate tech projects****Tech Stack:** *Next.js, JavaScript/TypeScript, CSS/SCSS, HTML, Git*

- Developed the initial version of the website using Webflow for ProgramEquity's hackpod project, effectively showcasing the concept of hackpods and creating a user-friendly platform for volunteers to register
- Utilized Next.js to develop a high-performance website for ProgramEquity's hackpod project, providing a seamless platform for volunteers to register. This transition from Webflow to Next.js resulted in a 40% improvement in page loading speed, enhancing the user experience and engagement
- Collected feedback on past hackpods and optimized the website performance
- Configured GitHub pull request metrics display on the UI using Probot

Ava.codes – Software Engineer**Sep 2021 – June 2022****Fast-growing software engineer outstaffing company, serving clients like Shopify & TraceSafe****Tech Stack:** *Angular 2+, NgRx, RxJS, ngx-charts, JavaScript/TypeScript, CSS/SCSS, HTML, Git*

- Designed and implemented a novel feature for website video uploading and viewing for a US employee upskilling software company (**SkillDirector**), meeting detailed client UI specs and using complex backend-based routing logic, which increased user engagement by 30%.
- Implemented an organizational system for NgRx functions that sped up new feature implementation by 20%, enhancing the overall performance and efficiency of the system
- Implemented a feature for KPI visual projection for a shop-floor management software company in Germany (**SFM Systems**), using ngx-charts library
- Created a vast collection of framework-agnostic web components of the US payments software company (**ACHQ**), such as navigation, page and panel components, form elements, e.g. drop-downs, using JS code injection to extend the capabilities of the development environment

Javatar – Intern / Software Engineer (part-time)**June 2020 – Aug 2021****English tutoring software startup founded by ex-Pitchbook & ex-Luxoft senior engineer****Tech Stack:** *Angular 2+, RxJS, JavaScript/TypeScript, CSS/SCSS, HTML, Git*

- Led upgrades to the latest versions of the build and development tools across all frontend projects, such as Angular, RxJs, NgRx increasing the efficiency of the build and development process by 25%. Implemented ESLint support and Git pre-commit hooks to enhance code quality and maintain consistency throughout the projects
- Spearheaded the update of a suboptimal routing approach for 8 application modules to enable faster feature implementations: redefined the module structure, deleted redundancies and combined application components into a simplified routing system
- Created pixel-perfect complex UI for the product and added interactivity, e.g. rich forms, carousel views, dynamic user input visualization
- Implemented reactive forms validation for student/tutor interaction, set up page component routing

EDUCATION

Massachusetts Institute of Technology, Cambridge	Aug 2023 – Jun 2024
MIT Emerging Talent, Certificate Program in Computer and Data Science	
Extracurriculars: GMI (Global Mentorship Initiative) Career Readiness Mentorship Program	
Vistula University, Poland	Fall 2022
MS in Computer Engineering	
Extracurriculars: React Basics (Coursera certificate, Meta), Advanced React (Coursera certificate, Meta)	
Taras Shevchenko National University of Kyiv	Sep 2021 – Dec 2022
MS in Applied Mathematics, Dept of Computer Science and Cybernetics, full merit-based scholarship	
Extracurriculars: frontend and backend SW engineering (study program from EPAM Systems); Front-End JavaScript Frameworks: Angular (Coursera certificate, Hong Kong University of Science and Technology)	

SKILLS

- **Programming:** JavaScript, TypeScript
- **Frameworks:** Next, React, Angular
